

RUSSELL CHEST SEAL®

Successful treatment of a hemopneumothorax with a chest seal includes two factors: First, the chest wound remains sealed with the device, and second, the increase of intra-pleural pressure is prevented. By these definitions, the Russell Chest Seal® was one of only two chest seals proven 100% effective in an open chest wound model with active bleeding.¹

The Russell Chest Seal is a hydrogel-based laminar dressing with an integral low-profile, four-aperture valve. Our hydrogel base is proven effective in extreme temperatures, demonstrating no breaches in adherence when tested at -19.5°C (-3.1°F) and at 71.5°C (160.7°F); even in the presence of hair, blood, and sand.²

Each design element of the Russell Chest Seal is intended to improve its performance. Its advanced hydrogel matrix is mounted on a non-woven fabric which enables a flexible and continuous adhering surface over bony prominences and naturally curving anatomy. Finally, the Russell Chest Seal uses a silicone-coated release liner, preventing stretching and distortion of the dressing during the removal of the backing for application.

SPECIFICATIONS

PN	PDF0680
Packaged dimensions	5.5" x 5" (14 x 12.7cm)
Product dimensions	8" x 6" (20.3 x 15.2cm)
Weight	0.7oz (19.8g)
Shelf life*	4 years
Misc.	Berry Compliant

* From date of manufacture

USER-FRIENDLY DESIGN: Fast, easy, and intuitive to apply. Large central hole in base material allows for quick, accurate placement with a reduced risk of obstructing the wound opening.

COMPACT: Low-profile and highly flexible, easily packs into any medical kit.

RELIABLE: Patented hydrogel base keeps the device in place over several hours, while four large peripheral apertures allow for drainage of air and blood.

COLOR-CODED: Simplifies emergency medicine, enabling all responders to select the right product, for the right intervention, at the right time.
